Luminary Architectural Signs WALL-MOUNT FRAME CONSTRUCTION

Extra heavy duty design to structurally mount large, 1/2" thick crystal-clear glass. Two piece design consisting of a sturdy, hard wood framing support that bolts to the wall and holds the glass firmly in place. A thick, decorative brushed aluminum frame is mounted on top of the glass and is embedded with Super Brite® LED strips around the entire perimeter which illuminates the glass on the edge. A low voltage supply line is concealed through the back-side of the frame, typically drawn through the wall and fed from a regulated 12VDC power supply.

Available in 18 standard sizes

Luminary Frame Signs

Each Luminary Frame Sign comes assembled with 12 volt Ultra Bright™ LED's and is supplied with a standard AC Adapter that is sized to operate the correct number of LED's. All glass used for Luminary Frame signs is either 3/8" or 1/2" thick Crystal Clear Glass (also known as Low Iron Glass) and is drilled with 9/16" diameter holes for mounting the glass to a wall using special Stand-Off hardware. The normal size of the glass used for Luminary Frame Signs is 2" less than the overall size of the assembled sign. All Luminary Frame Sign glass is fabricated with ultra high polished edges to allow maximum LED illumination penetration into the glass.

Available in 20 standard sizes
